

Controls: WASD for movement, scroll wheel zooms in and out, E to interact with Jobs, Escape to close tasks

General: The top right of the screen displays the names of the jobs you have to complete. Only you can complete these tasks. The top middle has the timer, if the timer reaches zero before you win you lose. Tasks that you can interact with have a square on the ground in the color of your cube next to it

How to play: Around the green cylinder at the center of the room players will see 4 rectangles jutting out. Once players are ready to begin players should put their character close to one of these rectangles and press E. On the UI element that appears all players must press and hold the red button. Once all 4 players are doing so, the timer will begin and the red walls that blocked player movement outside of the starting area will disappear and players will be free to roam around the map and try to complete their tasks in the allotted time. To win, all players must complete their jobs and return back to the starting green cylinder and press and hold the buttons as they did to start the match to win.

Task Names and instructions:

Matching:

To start this task you must wait until all players have completed their Data Input jobs. Once all players with a DataInput Job have completed the job you will be able to start the task with E. Your goal is to match the player cube colors shown at the bottom to their corresponding name and major. To do so, click and drag the wire at the bottom of each section to the correct match: Cube color -> Name, name-> major. If you incorrectly place a wire, click on the starting, bottom connection of the wire you wish to reset and drag away. This task will close if you put in the correct combination.

KeyPad:

To start this task you must wait until other players have completed both parts of the Decrypt Job. Once they have done so you will be able to press E to open the job. The colors on the left and right of the UI indicate which code segment you must input first. The left color is the code you input first, the right color code the second. Two other players will have the green code and the gold code which you must input in the correct order. If you make a mistake you clear the code by inputting numbers until the display reads incorrect.

DataInput:

Press E to open this Task. Answer the questions provided by clicking the blue text field then typing your response. When you are satisfied with your response click the red submit button which will turn green if your input is accepted. When both submit buttons are green you have completed this task and may leave.

Decrypt:

Click the red decrypt button and wait for the progress bar to fill up. You may leave this task and come back to it at any time, progress will continue. The task completes when the bar is full.
